### Architecture Diagram

## How it is built?

This extension is built using **Microsoft Graph API** to read and update data with Office 365. The user needs to sign-in with Office 365 account to access this extension. Hence the communication between your tenant and Microsoft Office 365 direct. We will not store any information on our servers except office 365 login email address for license validation purposes and product update information.

## How this tool handle user authentication with Office 365?

This tool uses the standard OAuth 2.0 authorization code flow (Device code authentication) to authenticate users with Office 365.

## How this tool securing communication with Office 365?

We are collecting and updating all the information using Microsoft Graph Api through secure HTTPS channel.

## What information will this app collect?

This tool will collect following basic Office 365 users and license data:

- ❖ Logged-in user's e-mail Id.
- ❖ All Office 365 Users' information under in which the logged-in user domain.
- ❖ All Office 365 licenses associated with the users.
- ❖ Users and license usage reports.

## What information will this app update in Office 365?

Using this tool, you can update following Office 365 Users' data:

- ❖ Update users' basic details.
- ❖ Add new Office 365 licenses.
- ❖ Replace /Remove existing office 365 license assignments.

## Will my data be transmitted outside the Microsoft servers?

Absolutely NO. We have used Microsoft APIs to develop this add-in and hence no data will be passed outside of Microsoft servers. All your data are safe with Microsoft.

## What Admin Role required to use this app?

The logged-in user should be either a **License administrator** or a **User management admin** or a **Global admin** to manage users' license. Without anyone of the above admin role, you can generate users and license report, but you can't add/remove users license.

## Does this tool require Admin consent?

By default, "No". You can generate users and license report and manage users' license without providing Admin consent to our app. But if you need to generate users last logon and license usage summary report, then your Global admin needs to grant permission to use our app to read usage reports from your tenant.

Will this tool store Office 365 data in any other external server?

No, we will not store data in any other place except from chrome extension storage.

Will this app store in local machine?

This app stores users and license information only in chrome extension storage. All the data will be cleared once you closed the app or closed the Chrome browser.

Will this app use automation services like Windows Service, Scheduler, Batch script, etc...?

No, we don't use any automation services.
