Apps4.Pro Planner Migrator Security Document

About the app

Apps4.Pro Planner Migrator extension is a web-based Chrome Extension application that can be installed and used on any operating systems (Windows, Mac, Linux) with Chrome browser. This app offers excellent features for Microsoft Planner and saves time for managers and help users to work more effectively and planned.

How it is built?

This app use Microsoft provided Rest APIs and Graph APIs to perform actions in Planner. All the commutation between this app and Microsoft Planner is direct, we will not store any information on our servers except your Office 365 login email address for license validation purpose.

How this app handle user authentication with Office 365?

This tool uses the standard OAuth 2.0 authorization code flow (Device code authentication) to authenticate users with Office 365. When user sign-in, the app redirects the user to Microsoft Sign-in page (https://microsoft.com/devicelogin), once the user completed the sign-in process, the app gets access token and use it for further communication between the app and Microsoft Planner.

How this app securing communication with Microsoft Planner?

We are collecting and updating all the information using Microsoft Rest and Graph APIs through secure HTTPS channel.

Does this tool require Admin consent?

Absolutely NO. You can migrate user's plans with associated group without providing Admin consent to our app.

What information will this app collect?

This app will collect following basic and planner data:

- Logged-in user' e-mail Id.
- All Office 365 Groups in which the logged-in user is member of.
- All Plans associated with the groups.
- Tasks, Buckets, Attachments, Comments and Users from required plans.

What information will this app update in Microsoft Planner?

Using this app, you can update following Microsoft Planner data:

- Create new plan with Office 365 group.
- Add members members in Office 365 group
- Create new buckets
- Create new tasks
- Upload files into O365 group.

Will my data be transmitted outside the Microsoft servers?

Absolutely NO. We have used Microsoft APIs to develop this add-in and hence no data will be passed outside of Microsoft servers. All your data are safe with Microsoft.

Will this app store planner data in local machine?

This app store plans and tasks information only in chrome extension storage. All the data will be cleared once you closed the app or closed the Chrome browser.

Will this app use database to store any data?

This app uses browser embedded database (Indexed DB) to store debug log files and logged-in user information.

Will this app store planner data in any other external server?

No, we will not store data in any other place.

Will this app use automation services like Windows Service, Scheduler, Batch script, etc...?

No, we don't use any automation services.

Does this app require any special permission to use?

No special permissions required. As per current Planner design only Plan members can able to read and update planner data, so the account which you are going to use with this tool should be a member the plans those you want to migrate.
