

Apps4.Pro Teams Migrator

Security Document

About the app

Apps4.Pro Teams Migrator is a web-based Extension app that can be installed and used on any operating systems (Windows, Mac, Linux) with Edge and Chrome browser. This app helps you to successfully migrate the following Teams components between two Office 365 tenants. You can also use this app to migrate teams within a single tenant.

How it is built?

This app use Microsoft provided Rest APIs and Graph APIs to perform actions in Teams and associated services. All the communication between this app and Microsoft Teams is direct, we will not store any information on our servers except your Office 365 login email address for license validation purpose.

How this app handle user authentication with Office 365?

This tool uses the standard OAuth 2.0 authorization code flow (Device code authentication) to authenticate users with Office 365. When user sign-in, the app redirects the user to Microsoft Sign-in page (<https://microsoft.com/devicelogin>), once the user completed the sign-in process, the app gets access token and use it for further communication between the app and Microsoft Teams.

How this app securing communication with Microsoft Teams?

We are collecting and updating all the information using Microsoft Graph APIs through secure HTTPS channel.

Does this tool require Admin consent?

Absolutely NO. You can migrate user's teams with associated group without providing Admin consent to our app.

What information will this app collect?

This app will collect following Teams and associated data:

- Logged-in user' e-mail Id.
- Teams and their associated Office 365 group and group-specific settings.
- Teams Users (Members and Owners)
- Channels, channel-specific settings and Channel Conversations.
- Files, OneNote and Wiki tab content
- Planner (Plan, Buckets, Tasks, Labels, Attachments, and Comments)

What information will this app update in Microsoft Planner?

Using this app, you can update following Microsoft Teams data:

- Create new team with Office 365 group.
- Add members and owners in Team
- Create new channels and tabs
- Create new conversations
- Update tab content
- Upload files into Teams associated site.

Will my data be transmitted outside the Microsoft servers?

Absolutely NO. We have used Microsoft APIs to develop this add-in and hence no data will be passed outside of Microsoft servers. All your data are safe with Microsoft.

Will this app store Teams data in local machine?

This app store teams and related information only in chrome extension storage. All the data will be cleared once you closed the app or closed the Chrome browser.

Will this app use database to store any data?

This app uses browser embedded database (Indexed DB) to store debug log files and logged-in user information.

Will this app store Teams data in any other external server?

No, we will not store data in any other place.

Will this app use automation services like Windows Service, Scheduler, Batch script, etc...?

No, we don't use any automation services.

Does this app require any special permission to use?

No special permissions required. As per current Teams design only Team owners and members can able to read/update teams conversations and planner data, so the account which you are going to use with this tool should be owner (and member) of the teams those you want to migrate.
